

# MCQ Quiz: Types of Operating Systems

Unit-1 Introduction to Operating System

Lecture – 5

# Question 1

- **What is the main goal of a Multiprogramming Operating System?**
  - A) To minimize CPU response time
  - B) To run multiple programs simultaneously by maximizing CPU utilization
  - C) To provide real-time processing
  - D) To support multiple users at once

# Question 1

- **What is the main goal of a Multiprogramming Operating System?**
  - A) To minimize CPU response time
  - **B) To run multiple programs simultaneously by maximizing CPU utilization**
  - C) To provide real-time processing
  - D) To support multiple users at once

# Question 2

- **In a Time-Sharing Operating System, what is the small time slice allocated to each process called?**
  - A) Time Slot
  - B) Time Quantum
  - C) Time Frame
  - D) Time Interval

# Question 2

- **In a Time-Sharing Operating System, what is the small time slice allocated to each process called?**
  - A) Time Slot
  - **B) Time Quantum**
  - C) Time Frame
  - D) Time Interval

# Question 3

- **Which feature is NOT a characteristic of a Real-Time Operating System?**
  - A) Deterministic behavior
  - B) Minimal latency
  - C) Interactive multi-user access
  - D) Task prioritization

# Question 3

- **Which feature is NOT a characteristic of a Real-Time Operating System?**
  - A) Deterministic behavior
  - B) Minimal latency
  - **C) Interactive multi-user access**
  - D) Task prioritization

# Question 4

- **What is the key difference between Hard Real-Time and Soft Real-Time systems?**
  - A) Hard real-time systems tolerate missed deadlines
  - B) Soft real-time systems never miss deadlines
  - C) Missing a deadline in hard real-time systems leads to failure
  - D) Both are the same

# Question 4

- **What is the key difference between Hard Real-Time and Soft Real-Time systems?**
  - A) Hard real-time systems tolerate missed deadlines
  - B) Soft real-time systems never miss deadlines
  - **C) Missing a deadline in hard real-time systems leads to failure**
  - D) Both are the same

# Question 5

- **In Multithreading OS, what do threads within the same process share?**
  - A) Memory space
  - B) CPU only
  - C) Separate file systems
  - D) Different operating systems

# Question 5

- **In Multithreading OS, what do threads within the same process share?**
  - **A) Memory space**
  - B) CPU only
  - C) Separate file systems
  - D) Different operating systems

# Question 6

- **Which of the following is a challenge of Multiprogramming OS?**
  - A) Slow CPU speed
  - B) Complex memory management
  - C) Lack of interactivity
  - D) Limited user support

# Question 6

- **Which of the following is a challenge of Multiprogramming OS?**
  - A) Slow CPU speed
  - **B) Complex memory management**
  - C) Lack of interactivity
  - D) Limited user support

# Question 7

- **A Distributed Operating System primarily provides:**
  - A) A single CPU system
  - B) Resource sharing across multiple computers appearing as one system
  - C) Single-user functionality
  - D) No fault tolerance

# Question 7

- **A Distributed Operating System primarily provides:**
  - A) A single CPU system
  - **B) Resource sharing across multiple computers appearing as one system**
  - C) Single-user functionality
  - D) No fault tolerance

# Question 8

- **What type of Embedded OS includes UI, networking, and multitasking capabilities?**
  - A) Standalone Embedded OS
  - B) Real-time Embedded OS
  - C) Smart Embedded OS
  - D) Distributed OS

# Question 8

- **What type of Embedded OS includes UI, networking, and multitasking capabilities?**
  - A) Standalone Embedded OS
  - B) Real-time Embedded OS
  - **C) Smart Embedded OS**
  - D) Distributed OS

# Question 9

- **Why is security a major concern in Distributed OS?**
  - A) Because of the complex UI
  - B) Due to network exposure and multiple access points
  - C) Because it only supports single user
  - D) Because it uses less CPU

# Question 9

- **Why is security a major concern in Distributed OS?**
  - A) Because of the complex UI
  - **B) Due to network exposure and multiple access points**
  - C) Because it only supports single user
  - D) Because it uses less CPU

# Question 10

- **What is a typical feature of Embedded Operating Systems?**
  - A) Large resource usage
  - B) Minimal resource usage and high reliability
  - C) Support for multiple simultaneous users
  - D) Heavy graphical interfaces

# Question 10

- **What is a typical feature of Embedded Operating Systems?**
  - A) Large resource usage
  - **B) Minimal resource usage and high reliability**
  - C) Support for multiple simultaneous users
  - D) Heavy graphical interfaces
